[Metric System - edHelper](#)

Conversion between metric and standard units can be tricky since the units of distance, volume, area and temperature can seem rather arbitrary when compared to one another. Although the metric system (using SI units) is the standard system of measure in most parts of the world many countries still use at least some of their traditional units of measure. In North America those units come from ...

The metric system is a system of measuring. It is used for three basic units of measure: metres (m), litres (L) and grams (g). Units What makes the metric system so useful is that all three units of measure are based on the powers of ten (including 0.000001, 0.001, 0.01, 0.1, 1, 10, 100, 1000). Let's examine the METRIC SYSTEM CONVERSION chart to understand this idea better. Units kilo- hecto ...

The prefixes attached to metric units carry the same meaning for all base units. The metric system is based upon powers of ten, which is convenient because: A measurement in the metric system that is represented by a rational number remains a rational number after metric unit conversion. (For example, 250 mm = 25 cm = .25 m).
